[Download Computer Science Project For Class 12](#)

:- It is designed with a bias toward system programming (e.g., for use in embedded systems or operating system kernels), with performance, efficiency and flexibility of use as its design requirements. C++ has also been found useful in many other contexts, including desktop applications, servers (e.g. e-commerce, web search or SQL servers), performance-critical applications (e.g. telephone switches or space probes), and entertainment software.<sup>[8]</sup> C++ is a compiled language, with implementations of it available on many platforms and provided by various organizations, including the FSF, LLVM, Microsoft and Intel.

:- C++ is standardized by the International Organization for Standardization (ISO), with the latest (and current) standard version ratified and published by ISO in September 2011 as *ISO/IEC 14882:2011* (informally known as C++11).<sup>[4]</sup> The C++ programming language was initially standardised in 1998 as *ISO/IEC 14882:1998*, which was then amended by the C++03, *ISO/IEC 14882:2003*, standard. The current C++11 standard supersedes these, with new features and an enlarged standard library. Before the initial standardization in 1998, C++ was developed by Bjarne Stroustrup at Bell Labs, starting in 1979, who wanted an efficient flexible language (like the C language), which also provided high-level features for program organization.

**Function:-** A function is a group of statements that together perform a task. Every C++ program has at least one function, which is **main()**, and all the most trivial programs can define additional functions. A function **declaration** tells the compiler about a function's name, return type, and parameters. A function **definition** provides the actual body of the function. The C++ standard library provides numerous built-in functions that your program can call. For example, function **strcat()** to concatenate two strings, function **memcpy()** to copy one memory location to another location and many more functions.
